

CONSTRUCTION MANAGEMENT AND INSPECTIONS

ENTRUST Construction Managers will act as the client's liaison to the Outside Plant (OSP Construction Contractors) team and will manage the overall construction of the client's fiber-optic network(s). The Construction Manager will review overall compliance with project schedules and specifications, assessing Contractor adherence to public works and right of way restrictions, performance of construction activities, and development of applicable project documentation.

ENTRUST Construction inspectors provide on-site supervision to determine compliance with project specifications, safety and permitting requirements. In addition, we will provide quality review on installation and ground restoration in real time. All field data and information related to changes in the field, as built and redline information will also be acquired and reviewed in real time. In addition to these services, on-site inspection services provide field representation, to assist the client with oversight of crews in the field.
